

Flow ULTRA/ULTRA-R

Ideal for HRV retrofit in living spaces and small offices

FlowULTRA is the evolution of retrofit HRV with wall-mounted installation dictated by the need to **ensure proper air exchange in recently upgraded contexts**, while safeguarding the energy efficiency provided by the insulation of the building envelope. A continuous dual-flow ventilation unit designed to serve individual rooms, with **adjustable airflow rates between 15 and 120 m³/h**. Installed with two 100 mm coring holes, FlowULTRA is supplied as standard with a white ABS cover for a neat connection to the existing environment. A solution designed to **meet the needs for healthy air in medium-sized rooms**, small offices, professional offices, medical surgeries and open-plan spaces.

The continuous exchange action, combined with the very high air filtration capacity of the **ePM2.5 65% filter**, ensures a healthier and more comfortable environment, preventing particulates, smog, spores, pollen and allergens from entering from outside. Energy savings are guaranteed by the **heat recovery unit with efficiency of up to 88%**. Effective in preventing condensation and mould, FlowULTRA is also ideal for **application in basements and cellars**. The air pipes can be partially ducted using a special optional kit to maximise installation flexibility.

FlowULTRA-R, your ally against radon

The **FlowULTRA-R** version is designed to help **contain the radon risk** by effectively diluting the gas. This solution is particularly suitable for **retrofit applications in basements** and all high-risk contexts. **Available with CO₂ and VOC sensors**, the HRV unit can be managed remotely via the **Helty Home app** setting customised scenarios and exporting data history.

Sensors for automatic humidity, CO₂ and VOC management

It is easy to control it from anywhere in the room using the included infrared remote control.

1. Cloud control panel connection required
2. In hyperventilation mode

3. With 230 V AC supply voltage
4. According to UNI 3744:2010

5. Measured in a 30 m² semi-anechoic environment at a distance of 3 m
6. The Cloud control panel functions are lost
7. In accordance with EN 13141-8:2014-09
